Course Prefix and Number:  BIO 142
Credits: 4

Course Title: Human Anatomy and Physiology II

Course Description: Integrates anatomy and physiology of cells, tissues, organs, and systems of the human body. Integrates concepts of chemistry, physics, and pathology. Part II of II. Prerequisite: BIO 141. Lecture 3 hours. Laboratory 3 hours. Total: 6 contact hours per week.

General Course Purpose: To prepare health science and beginning science students with a basic understanding of anatomy and physiology through the lecture and practical (laboratory) approach. The course is primarily designed for health science students and science majors.

Course Prerequisites and Co-requisites:
Prerequisite: BIO 141

Course Objectives:
Upon completing the course, the student will be able to
a. Demonstrate scientific writing and speaking;
b. Identify and describe the pathogenicity and control of microbes, as well as the Gram stain procedure;
c. Discuss the anatomy of major endocrine organs, their secretions, and the functions of the hormones that are secreted in addition to selected endocrine disorders;
d. Identify the anatomy and physiology of the circulatory system, to include the blood, heart, and blood vessels;
e. Describe the anatomy and physiology of the respiratory system;
f. Discuss the anatomy and physiology of the urinary system, to include fluid, electrolyte, and acid-base balance;
g. Describe and analyze the anatomy and physiology of the digestive system, to include nutrition and metabolism; and
h. Identify and describe the anatomy and physiology of the reproductive system, to include human development.

Major Topics to Be Included:
a. Histology
b. Human systems analysis (e.g., circulatory, digestive, respiratory, nervous, musculoskeletal, endocrine, reproductive)
c. Pathological concepts and clinical applications to human systems
d. Disease etiology

Effective Date of Course Content Summary:  August 16, 2011
